msgfmt msgfmt Gettext msgfmt

Unix

```
msgfmt -o filename.mo filename.po
```

Windows

```
msgfmt -o filename.mo filename.po
```

Diagram illustrating a memory stack structure. It shows a sequence of boxes: a box labeled 'PO' (Program Origin), followed by a box labeled 'bash', and then a series of empty boxes representing memory slots.

Unix

```
# Find PO files, process each with msgfmt and rename the result to MO
for file in `find . -name "*.po"` ; do msgfmt -o ${file/.po/.mo} $file ; done
```

Windows

Window **Cygwin**

potomo.sh

```
#!/bin/sh

# Find PO files, process each with msgfmt and rename the result to MO
for file in `usr/bin/find . -name '*.po'` ; do /usr/bin/msgfmt -o ${file}.po.mo $file ; done
```

```
cd C:/path/to/language/folder/my-plugin/languages & C:/cygwin/bin/bash -c  
/cygdrive/c/path/to/script/directory/potomo.sh
```
